

Guidelines for Power BI

PizzaPlaceSales:

The provided data set is based on a year's worth of sales from a fictitious pizza place, including the date and time of each order and the pizzas served, with additional details on the type, size, quantity, price, and ingredients.

Tasks:

You are a data analyst who has been provided with a sample data set to work on the following tasks:

1. Use Power BI to create and visualize the output.
2. The power BI solution should be relevant to the subject matter.
3. Additional insights, other than the relevant insights provided in the recommended analysis, will be appreciated.
4. Clearly summarize 3 things you have learned on both domain/function and data analytics while working on this project.

1. Recommended Analysis:

Sr.#	Measures
1	How many customers do we have each day? Are there any peak hours?
2	How many pizzas are typically in an order? Do we have any bestsellers?
3	How much money did we make this year? Can we identify any seasonality in the sales?
4	Are there any pizzas we should take off the menu, or any promotions we could leverage?

Description of Data Files:

This section contains all the meta information regarding the columns described in CSV files:

Data Dictionary:

S.No.	Table	Field	Description
1	orders	order_id	Unique identifier for each order placed by a table
2	orders	date	Date the order was placed (entered into the system prior to cooking & serving)
3	orders	time	Time the order was placed (entered into the system prior to cooking & serving)
4	order_details	order_details_id	Unique identifier for each pizza placed within each order (pizzas of the same type and size are kept in the same row, and the quantity increases)

5	order_details	order_id	Foreign key that ties the details in each order to the order itself
6	order_details	pizza_id	Foreign key that ties the pizza ordered to its details, like size and price
7	order_details	quantity	Quantity ordered for each pizza of the same type and size
8	pizzas	pizza_id	Unique identifier for each pizza (constituted by its type and size)
9	pizzas	pizza_type_id	Foreign key that ties each pizza to its broader pizza type
10	pizzas	size	Size of the pizza (Small, Medium, Large, X Large, or XX Large)
11	pizzas	price	Price of the pizza in USD
12	pizza_types	pizza_type_id	Unique identifier for each pizza type
13	pizza_types	name	Name of the pizza as shown in the menu
14	pizza_types	category	Category that the pizza fall under in the menu (Classic, Chicken, Supreme, or Veggie)
15	pizza_types	ingredients	Comma-delimited ingredients used in the pizza as shown in the menu (they all include Mozzarella Cheese, even if not specified; and they all include Tomato Sauce, unless another sauce is specified)
